

Intersection and polymorphism

$\forall b \leq \text{True thy.}$

Logical OR

```
$ ((false or nil, a) -> a) and  
  ((b, term()) -> b) when a: term(), b: not(false or nil)  
def logical_or(x, y) when x == false or x == nil, do: y  
def logical_or(x, _), do: x
```
